

OUR QUALITY ADVANTAGE

Ansell's commitment to quality assurance and best-in-class quality controls ensure superior product performance and consistency.

Ansell has upheld an unwavering commitment to quality for over 125 years. Our stringent quality standards and rigorous quality controls ensure the performance, reliability, and consistency of our products. Exceptional quality PPE is critical to ensuring worker safety. That's why over 10 million workers in medical and industrial settings continue to put their trust in Ansell's quality every day.

Thinking of people and planet first

Ansell Protects™

5 PILLARS OF ANSELL'S QUALITY ADVANTAGE

1 Stringent Quality Standards

At Ansell, our end-to-end quality controls ensure product performance and consistency at each stage of the production process, including R&D, design, manufacturing, packaging, and distribution. Our stringent quality controls are second to none and no other glove manufacturer has more comprehensive ISO certifications.

Even at the peak of the COVID-19 global PPE shortage, Ansell never compromised on quality. Unlike many other manufacturers, we don't take risky shortcuts, use low-grade raw materials, or experiment with inferior formulations.

2 Customer Centricity

We certify our products to meet all relevant regulations and applicable performance standards, and we're proud to share our products' performance metrics. We also certify our products to meet customer expectations. Unlike many other manufacturers of hand and body protection, we certify for fit, comfort, grip, color, and other value-added features that matter to our customers.

We collect customer feedback for each style and integrate customer needs and preferences into the product specification and quality control plan. This ensures our products are consistently delivering not only reliable performance and protection, but also the exceptional user experience our customers have come to expect.

Did you know?

We were the first manufacturer in the industry to certify disposable gloves for ergonomics. Our proprietary **ERGOFORM™ Technology** reduces strain on muscles, joints and tendons to reduce the risk of musculoskeletal disorders such as Carpal Tunnel Syndrome.

Ergonomic Design Technology

3 Global Presence

Ansell has a global team of over 700 quality assurance and regulatory affairs experts based all over the world and 23 quality control laboratories, 10 of which are ISO 17025 accredited.

We rigorously inspect the products produced in our factories in real time, and we're onsite at the factories of our manufacturing partners, closely managing supplier performance to meet our high standards for quality and consistency. We maintain presence and visibility at our own factories and the factories of our partners, inspecting and validating products and production processes to ensure top quality of every aspect from raw materials to formers to formulations.

4 Regulatory Expertise

Ansell's global Regulatory Affairs team leads the certification of regulated medical and industrial PPE, while effectively navigating a myriad of rules and standards across countries and industries. Our customers rely on our deep understanding of the complex and ever-changing regulatory landscape, as well as our local expertise in all the countries where we operate. Ansell has RA experts based strategically around the world in 13 countries including mature and developing markets. We have an intimate understanding of local laws and regulations all over the globe.

We also provide education and training to our customers on new and changing regulations so they can avoid non-compliance risks. Ansell is prominently present in various federations and standardization associations and we serve as a PPE industry expert to regulatory agencies. In fact, an Ansell employee is the President-Elect of the European Safety Federation, working directly with the European Commission.

5 Top-Of-The-Line eQMS

Our Electronic Quality Management System (eQMS) provides advanced analysis of product performance trends and customer feedback. We've made significant capital investments in our top-of-the-line digitally integrated eQMS, connecting over 20 quality management systems around the world into a single digital platform. Our eQMS is a quality control powerhouse that tracks and analyzes customer feedback, providing immediate, actionable insights to dynamically improve our products and processes. With advanced analytics, we're empowered to instantly leverage product performance data, ensuring that our products consistently meet our stringent quality standards and exceed customer expectations.

Ansell's Quality Advantage is rooted in our stringent quality standards and best-in-class quality controls. When you trust in Ansell, you can be assured that we proudly stand behind the exceptional quality of our products and put our dedication to worker safety above all else.
